AREAS OF CONCERN AND COMMENTS:

1. Closure letter was reviewed with emphasis on post closure care.
2. The monitoring wells were locked, had tags and were protected. Samples were last pulled in December 2008.
3. There was no evidence of leachate breakout problems.
4. No on site erosion was observed.
5. Adequate ground cover was provided on all areas with the exception of a few small patches (+/- 10 square feet).
Please make plans to reseed those areas in the Spring.

6. No surface water was impounded on the closed landfill unit.
7. No settling of the cap material was noted over the landfill unit.
8. The site can be secured by gates and cables when the scale attendant for the transfer facility is not on site.
9. Some of the vegetative cover was about 2 foot high, therefore plans for mowing the cap should be underway.
